EXPERIENCE

Vantaca, Wilmington, NC (Remote) — Front-End Engineer

July 2024 - Present

Front-end development on the Revenue Manager portal, an extension of the core Vantaca product. This portal allows users to manage bank accounts, service providers, expenses, and more. As the first React application at Vantaca, I was able to establish consistent coding standards, coherent folder structure, a shared component library, and more. I also worked with the back-end team to standardize inconsistent models in our database. We not only built the portal, but we set the foundation for best practices and created helpful utilities that future products and new developers will be able to utilize.

Affinity, San Francisco, CA (Remote) — Front-End Engineer

October 2021 - February 2024

Front-end development on Affinity's flagship CRM product, utilizing Typescript for developing a robust web application. We offer highly-advanced networking, allowing users to connect with both organizations and individual professionals. Additionally, I've worked extensively on both Affinity's Outlook extension and Chrome extension, plus continuous development on Affinity's design system, named Squigee.

Heretto, Rochester, NY — Software Developer

August 2020 - October 2021

Front-end development with a focus in Next.js and React. Primarily worked on a multi-tenant content portal which serves static content generated by the Heretto content API. This portal allows for fully-customizable styling for individual clients. Our clients included AT&T, Viewpoint, ACS Technologies, and more. Web Components are incorporated to circumvent React's weakness in rendering external HTML. Includes maintaining applications deployed using Google Cloud Platform.

EDUCATION

Rochester Institute of Technology, Rochester — Game Design & Development

August 2012 - Fall 2016

SKILLS

Node.js, React, HTML, CSS, Javascript, Typescript, PostgreSQL, AWS, Jest
