## EXPERIENCE

### **Affinity, San Francisco, CA — Front End Engineer**

October 2021 - February 2024

Front-end development on Affinity's flagship CRM product, utilizing Typescript for developing a robust web application. We offer highly-advanced networking, allowing users to connect with both organizations and individual professionals. Additionally, I've worked extensively on both Affinity's Outlook extension and Chrome extension, plus continuous development on Affinity's design system, named Squigee.

### **Heretto, Rochester, NY — Software Developer**

August 2020 - October 2021

Front-end development with a focus in Next.js and React. Primarily worked on a multi-tenant content portal which serves static content generated by the Heretto content API. This portal allows for fully-customizable styling for individual clients. Our clients included AT&T, Viewpoint, ACS Technologies, and more. Web Components are incorporated to circumvent React's weakness in rendering external HTML. Includes maintaining applications deployed using Google Cloud Platform.

### **Ellucian, Rochester, NY — Software Developer**

February 2017 - August 2020

Full-stack development using primarily Node.js, PostgreSQL, and React to build highly available and scalable applications, including a tenant management service, an authorization service, and a large-scale integration service. Worked directly with our user experience team in early adaptation and implementation of an Ellucian-themed component library using Material-UI components styled for re-use in many user interfaces. Includes maintaining services deployed using Amazon Elastic Container Service.

## EDUCATION

### **Rochester Institute of Technology, Rochester— Game Design & Development**

August 2012 - Fall 2016

## SKILLS

Node.js, React, HTML, CSS, Javascript, Typescript, PostgreSQL, AWS, Jest
