

Christian Gileski

React Developer | UI/UX Designer | Design Systems Engineer

Experience

Vantaca, Wilmington, NC (Remote) — Front-End Engineer

July 2024 - Present

- Led front-end direction on our Revenue Manager portal, an extension of the core Vantaca offering and the first React application at Vantaca.
- Established consistent coding standards, coherent folder structure, Typescript patterns, a shared component library, and more.
- Worked with the back-end team to standardize inconsistent models within our database and normalize API endpoint naming.

Affinity, San Francisco, CA (Remote) — Front-End Engineer

October 2021 - February 2024

- Developed new features on Affinity's flagship CRM product, a relationship intelligence platform built using React and Typescript.
- Built both our Outlook and Chrome extensions, which serve as convenient tools for accessing a suite of features previously only available in the main web application.
- Acted as a key member of our cross-team collaborative effort focused on developing our internal design system, as well as other reusable modules available to all front-end applications.

Heretto, Rochester, NY — Software Developer

August 2020 - October 2021

- Created our multi-tenant content portal which serves static content generated by the Heretto content API and allows customizable styling for individual clients.
- Built using React, Typescript, and Web Components to circumvent React's weakness in rendering external HTML.

Ellucian, Rochester, NY — Software Developer

February 2017 - August 2020

- Rebuilt our Tenant Management Service in React. This tool manages all user and account access for other Ellucian products.
- Built our React component library later adopted into an official Ellucian Design System, working directly with that team adapting existing components and developing new ones.
